
AUTHORS' GUIDELINES

General Policies

The International Oak Society will accept articles for the *Journal* from members or non-members, as long as the material presented is pertinent to the genus *Quercus*. Written contributions may be scientific/technical papers, historical, horticultural, instructional or general interest material (stories/articles of a particular tree, event, place, person, etc.) or letters to the editor; a mix of categories is encouraged. Material may be previously published or unpublished. The author's name, title, address, telephone and/or telefacsimile (fax) number should be included.

Copyrights

The *Journal of the International Oak Society* is not copyrighted, but authors, photographers and artists, whose materials are published in the *Journal* may claim copyrights on their work. Anyone wishing to use portions of the *Journal* for other publications should secure permission from the author, photographer or artist, and include a credit line indicating the *Journal of the International Oak Society* as the source of the material. All contributors submitting work, thereby, release their contribution for publication under the terms stated herein. Authors take full and sole responsibility for securing releases for use of material obtained from other sources, and agree to indemnify the International Oak Society against any claim of plagiarism involving their contribution.

Format

Journal contributions will be accepted in any legible format, preferably typed, in English only. Materials furnished on electronic disk must be Macintosh format only and should be accompanied by one paper copy, double spaced. Illustrations, photographs and slides should be sharp and compatible with monochromatic reproduction. Style, citation methods, and abstracts are left to the reasonable discretion of the author. Refer to the current Council of Biological Editors (CBS) *Style Manual for Biological Journals* for general guidelines.

Review

The Editorial Committee and Editors reserve the right to edit all contributions for grammar, correct English translation, current nomenclature, generally accepted taxonomic concepts, scientific accuracy, appropriateness, length and clarity; but assume no responsibility to do so. If such review results in significant disputes of factual material, the author will be contacted, if possible, or the paper may be rejected. Every effort will be made to retain the original intent of the author.

Acceptance

The International Oak Society reserves the right to reject any contribution intended for the *Journal* without showing cause. Contributions which are accepted will be published in a subsequent issue of the *Journal* at no fee to the author and without remuneration. Original material, artwork and photographs will be returned upon request only.
